

LABORATORY ANALYSIS

At Hydromission, it is our mission to ensure that accurate and reliable results are delivered to our customers.

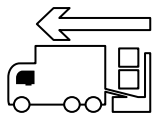

Our Service

We provide full range of testing services, covering physical, chemical and microbiological analysis.

We offer **one-stop-service** with fast turnaround times, from sampling to reporting, and assist in problems solving in order to maintain your standards and credibility.

We constantly review and update our testing methodologies and facilities to keep in pace with customers' needs. With our experience and expertise, we provide day-to-day support and consultation, and help you to comply with relevant national and international regulations.

1.

We arrange sampling personnel, sampling tools and transportation to collect samples at your premise.

2.

We register each sample upon receipt to maintain its records so as to ensure its traceability.

3.

We analyse samples according to well-established testing methodologies.

4.

We review the accuracy of our test results with regular internal quality control activities.

5.

We issue test reports to customers and provide consultation for better understanding of test results.
